

Day – 27 :

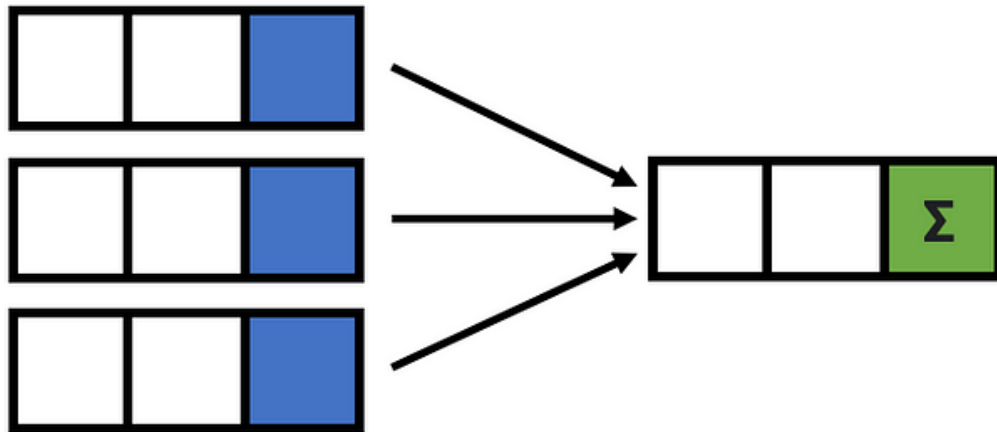

Window Functions in

SQL

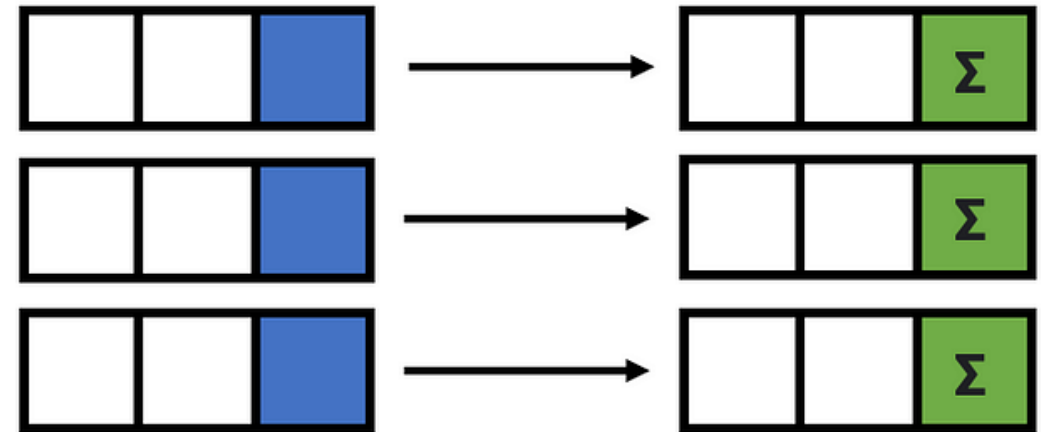

Window functions

Window functions perform calculations across a set of table rows related to the current row. They are useful for ranking, calculating running totals, percentages, and much more.

Aggregate Functions (SUM, AVG, etc.)

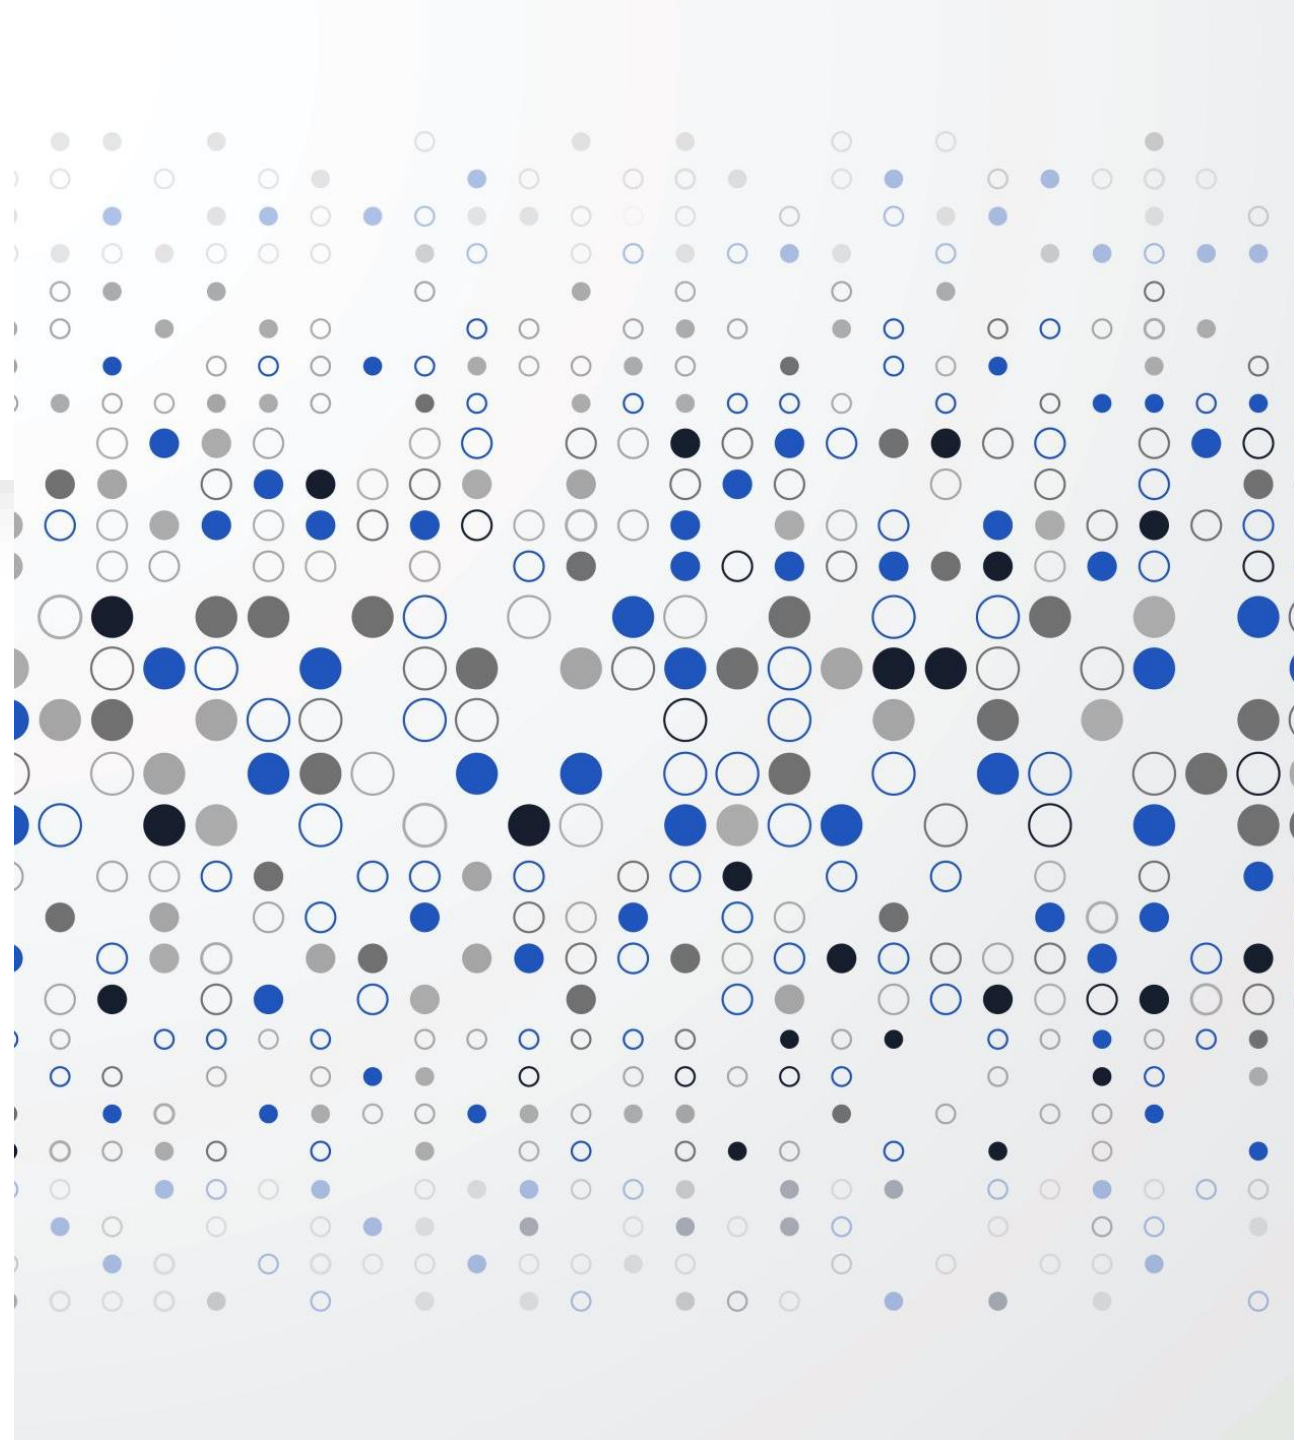

Window Functions

Assign a unique row number to each product within the same category.

```
SELECT
    product_name,
    category,
    price,
    ROW_NUMBER() OVER (PARTITION BY
category ORDER BY price DESC) AS
row_num
FROM products;
```

Calculate the running total of prices across all products.

```
SELECT
    product_name,
    price,
    SUM(price) OVER (ORDER BY price
DESC) AS running_total
FROM products;
```

Ranking Window Function

```
SELECT
    product_name,
    category,
    price,
    DENSE_RANK() OVER
(PARTITION BY category ORDER BY price
DESC) AS Ranking
FROM products;
```
