

Use of AI in Excel – 7 Days Mastery Program

Become A.I Expert in Excel in 7
days

7 Days A.I Excel Mastery Program

Day 1 : Get **Complex Formula** with A.I.

Day 2 : AI-Powered **Data Cleaning**

Day 3 : Create your **Own formula in Excel** using A.I.

Day 4 : Generate **Insights** from Data Using AI

Day 5 : File Management **Automation** Using A.I

Day 6 : AI-Powered Workbook **Automation**

Day 7 : AI-Powered Mail Merge and **Email Automation**

Day 1 : Get Complex Formula with A.I.

Prompt 1

In my Excel sheet, I have the following columns:

A: Employee ID

B: Joining Date

C: Employee Name

D: Department

E: Designation

F: Salary

G: City

I want to calculate the **tenure** of each employee (in years and months) based on their **Joining Date (Column B)** and the **current date**. Please help me write a formula to calculate the tenure for each employee and display it in **Column H (Tenure)**.

Prompt 2

I want to create a **unique list of departments** in **Column I** and calculate the **total salary for each department** in **Column J**. Please provide the formula or steps to generate this department-wise salary summary.

Prompt 3

Create a city-wise and department-wise total salary summary.

List all **unique cities horizontally** starting from **cell L2**, and all **unique departments vertically** starting from **cell L3**.

Display the **total salary** for each department–city combination starting from **cell M3**.

Prompt 4

Find all **employee names** whose **joining dates** are between **1st April 2020** and **31st March 2021**.
Provide a formula to filter and display these names.
