

A hand is holding a large, three-dimensional '@' symbol made of cardboard. The symbol is positioned on a wooden desk. In the background, a hand is holding a white envelope. The entire scene is softly blurred, creating a warm and professional atmosphere.

Day 7 : AI-Powered Mail Merge and **Email Automation**

Project Using VBA Code

Generate Bulk PDF

I have a letter template in a Microsoft Word document that contains dynamic fields written as <<Customer Name>> and << **Amount Pending** >>.

I want to update these fields using data from an Excel sheet, where:

- Column A** contains the **Employee ID**
- Column B** contains the **Customer Name**
- Column D** contains the **Amount Pending**

I need an Excel VBA code that will:

- 1.Prompt me to **select the Word template file**.
- 2.Replace <<Customer Name>> and <<**Amount Pending**>> in the Word document with the respective values from each row in Excel.
- 3.Generate a separate **PDF file** for each customer and **save the PDF using the Employee ID as the filename**.
- 4.Prompt me to **select a destination folder** where all the generated PDFs will be saved.

Please provide a complete and functional VBA solution to accomplish this task.

Get PDF File Path

I have an Excel file where:

Column A contains a list of **Employee IDs**

Each employee's PDF file is already available in a folder (with filenames matching the Employee IDs)

I want to write an Excel VBA code that will:

- ✓ Prompt me to **select the folder** containing the PDF files.
- ✓ Search for the matching PDF file for each Employee ID in Column A.
- ✓ If a match is found, insert the **full file path** of that PDF into **Column E** of the same row.
- ✓ Please provide a complete VBA code that performs this task.

Bulk Email Prompt

- I want to send email to all the customers using outlook, my all the customers email id's are available in my excel file
- In excel file fields are located as follows
 - 1) Column **B** has **Customer Name**
 - 2) Column **C** has **Email ID's**
 - 3) Column **D** has **Amount Pending**
 - 4) Column **E** Has **Attachment**
- Now I want to send all the emails by one click and every customer should get email in following format
 - Hello <<**Customer name**>>,
 - Your Amount is Pending Rs.<<**Amount Pending**>>
 - Please check the Attachment File for more details
- also note data my data has headers. So, Write a VBA Code for me to send all emails by one click.
